How to read this

- Each dot is one model; up and to the right is better.
- Higher = judges how the action changes the risk.
- Further right = picks the exact severity after the action (none/minor/moderate/severe).
- Filled dot = our run. Its bars show the 95% range the true score likely falls in.
- Hollow dot = the paper's value for the same model (same color). A thin line joins each model's two dots.
- Dashed line = the score from always giving the most common answer.
